

COS201 - INTRODUCTION TO JAVA PROGRAMMING

OBJECTIVE STUDY/PRACTICE QUESTIONS

Page | 1

1. What is computer programming?
2. Which of the programming languages is closer to machine code?
3. What is mnemonics?
4. Give an example of LLL.
5. What is the full meaning of LLL & HLL?
6. ___ programming language is faster but harder to read and write.
7. Which of the programming languages are closer to human languages and provide more abstraction?
8. Which programming language is easier to read?
9. Give examples of HLL.
10. ___ are user-friendly but rely on compilers or interpreters to translate code into machine language for execution.
11. What is the full meaning of IDE and what does it mean?
12. What are semantic errors?
13. List 6 popular IDEs.
14. Differentiate procedural programming from OOP.
15. List 2 concepts of procedural programming.
16. ___ is a memory location that holds any data you want to use for a program.
17. ___ are group of instructions put together to perform a particular task
18. Procedures are also called ___, ___, or ___
19. In Java, procedure is called ___
20. What is a procedural call? And how are programs executed in procedural programming?
21. ___ is a way of writing a long program where everything is organized into objects

*"STUDY TO SHEW THYSELF APPROVED UNTO GOD
A WORKMAN NEEDS NOT TO BE ASHAMED..."*

22. Each object has ___ and ___

23. ___ are information about the object

24. Data can also be called ___

Page | 2

25. ___ are the different things the object can do and activities it can perform

26. Classes are ___ for objects [blueprint]

27. To create an object, a ___ definition must exist

28. Class definition is also known as ___

29. What are attributes?

30. An object is an instance/a sample of a ___ with its own data and method

31. Is a class real? Why?

32. The process of creating an object from a class is called ___

33. ___ is a self-contained block of program code that carries out some action [behaviour/action/method/procedure]

34. List 3 basic components of OOP [A–PIE]

35. ___ is the enclosure of data and methods

36. ___ refers to concealment of a subject data and method from outside sources

37. ___ is the ability to create classes that share attributes and methods of existing classes but with more specific features

38. What is polymorphism?

39. Interpreter is ___ oriented

40. Compiler is ___ oriented

41. In what year was the first version of Java produced?

42. What is the full meaning of JDK?

– Ibaboa— JDK 9th edition

43. What is the difference between OOP & POP?

44. Java uses ___ and ___ as translators

45. Translator converts ___ to ___

46. Java is ___ sensitive

"STUDY TO SHEW THYSELF APPROVED UNTO GOD
A WORKMAN NEEDS NOT TO BE ASHAMED..."

47. There are ___ types of data types. List them
48. Non primitive data types can also be called ___
49. Primitive data types

Page | 3

- i. Byte - 8bits
- ii. Short - 16bits
- iii. Integer - 32bits
- iv. Long - 64bits
- v. Float - 32 float points
- vi. Double - 64bits
- vii. Boolean - true/false
- viii. Character - a single entity

50. Non primitive data type comprises ____, ____, ____ & ____

51. List 3 types of variables

52. ____ are variables declared inside the methods.

53. ____ is a self-contained block of code of a program code that carries out some action similar to a procedure in a procedural program

54. What type of variables only exist inside the method?

55. For booleans:

- true + true = ?

- true + false = ?

- false + true = ?

- false + false = ?

56. A Java expression is a combination of ____, ____ and ____ that evaluates to a single value [VOMi]

57. What is type casting?

58. What is explicit conversion?

59. List 2 types of type casting.

60. Which is from small to large? Which is from large to small?

61. Which type of casting is automatic and which type is manual?

62. List 2 types of type conversion in Java.

63. Name a third type of programming aside OOP & POP.

64. List 3 advantages of Java.

"STUDY TO SHEW THYSELF APPROVED UNTO GOD
A WORKMAN NEEDS NOT TO BE ASHAMED..."

65. Why is Java platform-independent?

66. _____ is an OOP feature that extends the functionality of an object.

67. _____ aspect of programming allows an object to function in multiple scenarios.

Page | 4

68. Behaviours are called _____ in Java.

69. Java has _____, _____ and _____. [ABI]

70. To commence any program, you must _____.

71. Every line of your programming must end with a _____.

72. We have 8 primitive data types categorized into:

- Whole numbers [BSIL]
- Fraction [FD]
- Boolean [TRUE/FALSE]
- Character

73. When a method is not returning anything, it is said to be _____

74. What are access specifiers?

- Public
- Private
- Protected
- Friendly

75. Every action thing must be done in a _____ except _____

76. For a program to run, the program must have a _____

77. What is the structure/syntax/function of a main method?

78. The address of an object in Java is called _____

79. An object is also a/an _____ of a class

80. Uniben Objectname = new Uniben ();

1 2 3 4 5 6 7

Where does instantiation start and end in the example above?

81. A class name cannot begin with a digit

82. Identify the declaration in the above example

new Uniben (); is a valid instantiation for the class uniben

83. Outline three properties/characteristics of default constructors

"STUDY TO SHEW THYSELF APPROVED UNTO GOD
A WORKMAN NEEDS NOT TO BE ASHAMED..."

84. Every class has a _____ constructor

85. If you don't like the default constructor, you can _____

86. What is looping in programming?

Page | 5 87. How many looping methods do we have in Java? List them

88. List 3 types of comments in Java [JBL]

- JAVADOC [/** */]
- BLOCK [/* */]
- LINE [// No ending]

89. What type of language is C++? High/Low

90. What's the full meaning of JVM?

91. Identify the constructor in the command below.

Student John = new Student();

92. System.out.println();

From the command above, identify

- i. The class
- ii. The object
- iii. The method
- iv. The non-static member of the system class

93. Java is _____ A. first interpreted, then compiled B. first compiled, then interpreted c. interpreted and compiled simultaneously

94. which type of loop checks before printing?

95. which type of loop has a silent do?

96. which type of loop prints before checking?

97. Java is modelled after _____?

98. What is the signature / default constructor for *Public class Schools*?

99. What is Concatenation?

100. How does Java programming relate to your field of study?
